Professional experience

Fyndiq - Lead Frontend Developer September 2015 - Present

I took the lead to introduce new technologies and frameworks (React, Webpack, ESLint, Jest) in our platform, decreasing the size of our mobile web application by 20%.

I designed and created a data-visualisation app to show order and product statistics to the merchants selling via our platform.

I architected and developed an open-source library of React components used by 4 of our internal and external websites. This helped reducing the time to market for most of our newer web products, as well as creating a united feeling across our sites

I am currently leading the conversion of our entire shopping platform to React (previously jQuery and Backbone), in a team of 4

Technologies

React
Redux
Webpack
Babel
Next.JS
Jest - Enzyme
ESLint - Prettier
Lerna
Storybook
PostCSS
Koa

Optimus - Lead App Developer January 2018 - Present

I am currently developing an application for Optimus, a start-up in Stockholm. I lead a team of 3 React-Native developers, and we are hoping to release the application in May 2018

Technologies

React-Native
Redux

Domora - Frontend Developer & Cofounder 2013 - 2015

Domora is a hardware startup focusing on the interoperability of connected devices. We created a new business from the ground up in a team of 4. My job, aside from helping to design the features of the product and presenting it to the press and exhibitions, was to design and develop the mobile application, and the website.

Technologies

Cordova
KnockoutJS
RequireJS
Grunt

Other interests

Frontend World

The frontend world is in constant move and it's for the best. Following it is my passion and trying out new frameworks or components is what I love.

The frameworks I'm the most interested in trying in a large-scale applications are Svelte + Sapper and Hyperapp

Design and UX

I believe that a good frontend developer can add a great value to the user experience, through the use of micro-interactions.

Designing an interface is something that I can and like to do

Open Source & Open Data

Contributing to open-source is something I like doing, and would like to do more.

I am also a contributor to the OpenStreetMap project, and created more than 100 000 objects in 40 countries
